ChatGPT in schools ?

By Samuel Coline and Marine

Artificial intelligence such as ChatGPT to be allowed in Australian schools from 2024

05/10/2023

In 2024, Australian schools will embrace AI, including ChatGPT, backed by unanimous education minister support. The forthcoming framework, designed by the national AI taskforce, addresses concerns, and receives a \$1 million investment for equitable implementation. Australia aspires to lead in responsible AI education, prioritizing teacher training and balanced technology adoption, aligning with global guidance.

ChatGPT is not a tool for learning. It must be banned in class

30/01/2023

Using ChatGPT as a tool to write an essay weakens the exercise of writing because the part of analyze and research is missing. Students need to develop their own ideas instead of copying other's. This is why ChatGPT is actually opposed to critical thought and learning.

Don't ban ChatGPT in schools. Teach with it

12/01/2023

Banning ChatGPT in the classroom is difficult to enforce effectively because and AI detection tools are not foolproof. We should adopt ChatGPT as an educational tool, to help generate lesson plans, offer personalized tutoring, improve writing skills and unleash students' creativity. Educators could use it too to create quizzes or other educational materials. It can also stimulate critical thinking by comparing the answers generated by AI, which are not always right or rigorous, with student responses. Moreover, today's students need to be exposed to AI tools like ChatGPT to be prepared for a world where AI is ubiquitous.
