Black Panther: Wakanda Forever review: Overshadowed by loss

Black Panther was Marvel's first film with a predominantly black cast, and was a huge success at its release in 2018. Despite the death of its main actor Chadwick Boseman two years ago, Marvel decided to create the sequel to the first film : "Black Panther Wakanda Forever".

Independence referendum: Scottish government loses court case

The second referendum, asked by Nicola Sturgeon, for Scotland independence was refused by the Supreme Court. Scotland prime minister, Mrs Sturgeon, will still fight for the independence and will try to demonstrate the want of the Scottish people in the months to come.

Germany covers mouths and wears rainbows on kit in World Cup protest

A political message towards soccer. During their first match of this very controversial World cup. The German team was photographed with one hand covering their mouths, to illustrate the feeling that they felt censored by FIFA.

To put it in context, the seven European teams wanted to wear an LGBT armband during the games to fight against the inequalities persisting in Qatar but this was refused at the beginning of the game.

So, this picture was the reaction of this team followed by the German interior minister, Nancy Faeser.

McLaren's F1 partnership with Gulf won't be extended

McLaren's F1 partnership with Gulf won't be extended
McLaren's partnership with Gulf Oil is over this year:

McLaren is a British supercar company known for its Formula 1 exploits, remarkable for its Blue and Orange livery. But Gulf Oil, who wears the iconic colours, decided to stop the partnership with McLaren this year and didn't wish to release the reasons.

Will the fans be disappointed?

We finally know how black holes produce the most brilliant light in the universe

Finnish scientists have discovered how the black holes produce the most brilliant light in the whole universe.

Actually, it is due to different interactions that cause the material to heat up and emit lights on a range of wavelengths, the other source is twin jets of material launched from the polar regions. That allows us to have a better knowledge on how the universe works.

Breakthrough paves way for new bowel cancer treatment

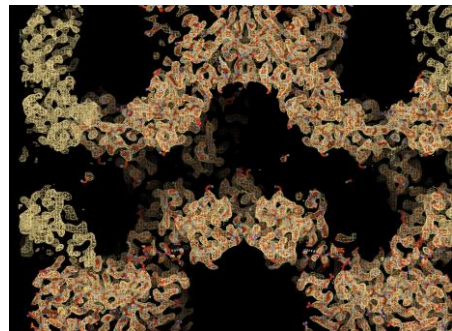

Scientists have recently uncovered the inner workings of tankyrase, a key protein implicated in colon cancer and linked to a wide variety of cell processes.

This study has provided vital information on this molecule, which may lead to better and less toxic anti-cancer drugs and may have great implications in the treatment of diabetes and inflammatory, cardiac and neurodegenerative diseases.

Researchers want to uncover new information using advanced cryo-electron microscopy.

In this way, they hope to be able to design structurally different tankyrase inhibitors.
